

Name: Robbie Young

The connections start with 19 frames, which is my system trying to only access the website and being prompted with entering the username and password.

It seems to begin with a handshake of some sort, with my computer and the server sending and receiving SYN and ACK messages to make sure both have a connection and are talking and listening to one another. At frame 7 is the HTTP request for the authentication to see if the computer is authenticated to access the server (which at this point it is not), which is then immediately acknowledged at frame 8 by the server and then responds with a denial. It seems as if after every request, there is always an acknowledgement message from the destination towards the source (as in after my system does the GET request, the server first acknowledges this before responding with the value). After the user types in the password, the computer then sends another GET request for the website with basic authentication (frame 20), which encodes the password but is not encrypted and not secure.

(<https://datatracker.ietf.org/doc/html/rfc7617#section-4>).

This info is then stored in the server somewhere, which allows the server to "save" myself being logged in for a certain amount of time, so that I do not have to log in every time I want to access part of the website. There is also some time out and keep alive frames before this, which is explained in the next paragraph.

Frames 20 - 40 represent the index of /basicauth/ directly after entering the correct username and password. Frame 20 begins with a GET request for the HTTP website itself, and the server response with a TCP ACK, and then respond with the website. The following frames then are TCP "Keep-Alive" frames, which I presume are each of the two (the system and the server) talking to one another making sure the other one is still operational, and to make sure that the ports on each one is still being listened to. However, after a certain amount of time, it seems as if the connection times out (starting at frame 41), and then the connection is closed on both sides with another finish and acknowledgement on both sides. However, the website still appears to be working through the browser, however neither the server nor the client is talking to one another.

After this the dancing.txt link is clicked and is represented by frames 44 - 73. Again, there is the TCP interaction to make sure both the server and computer are talking to one another, followed by an HTML authentication request, which the server then checks and returns an OK with the website (and would return a denial if not authenticated). Again, the TCP conversation between the two occurs to make sure both are alive and well, and then keep alive awaiting for the user to do something until the timeout occurs at frame 71 - 73.

All the other connections to the separate parts of the website follow similar patterns, and the following is a summary of frames and sections:

- 1 - 19 password prompt and keep alive
- 20 - 40 index of /basicauth/
- 41 - 43 timeout user took too long
- 44 - 73 dancing.txt and keep alive
- 74 - 85 backspace to index and keep alive
- 86 - 101 armed-guards.txt
- 102 - 108 backspace to index and keep alive
- 109 - 122 amateurs.txt
- 123 - 129 backspace to index and keep alive
- 130 - 165 cs338.jeffondich.com

Below are full photos of the entire interaction:
